question tree diagram food regular pick food delivery

layer 1: awareness

3 question sets:

- guess the number
- say how you feel about the number
- reaction to the details

hook
hi! - awareness
how do you feel about the spent on delivery/delivery this month?

#tap overshoot awareness

help off-ramps (<10% guess, 30% or more off)

close-or-guess (within 25% of guess)

[when correct high-level numbers and effort that they have general awareness - sure some feel it's a lot, some feel it's reasonable or a good flex/to awareness]

how do you feel about this number?

- **ok with it**
- **not great**

would you like to see what's behind this amount?

- **yes**
- **no**

that's 3x total orders in the last month, with most on Uber and Dilly! and a lot of small orders. [pause] [pause] [pause] does that feel like you expected?

- **no**
- **yes**

what didn't you see coming?

- **didn't realize I ordered that often**
- **didn't realize I was doing it on days of the week / weekdays**
- **didn't realize I was spending it at [macro/meal] so much**

#moment #pause/ice/ouch/shock
[ouch moment - feels some pain or frustration around, and is open to listening]

#moment #frequency #dirtd
[user orders frequently but hasn't treated the order as a frictionless ritual/ritual in the moment]

#moment #place of the week #dirtd
[user knows they order, but hasn't noticed when they do it — specific days, times, etc.]

#moment #habitual #dirtd
[user's spending is conventional or at least without anything 1. habit tucked in a specific

layer 2: purchase justification

1 set of questions:
exploration + general probing questions vs. explicitly ones

hey! when you think about why you order food, what feels most true?

#purchase justification

- **"I'm usually too drained to deal with cooking"**
  - **exploration: Understand the stress/energy triggers—is this work related, life-related, stressor-antecedent, or specific high-load moment?**
    - **probing follow up: "What's usually going on those days—work stuff, life stuff?"**
      - **#note #situational from stress driven**
        [order under stress, fatigue, time pressure, or low-bandwidth self-care]
        key signals: "when I'm stressed / just order", "busy week so I didn't cook", "I just needed something easy"
- **"It's just easier to order"**
  - **Understand if this is pure friction optimization—ordering who's because it's the lowest effort option, not because cooking is hard or stressful.**
    - **"What makes it feel easier—is it the time, the effort, or just not having to think about it?"**
      - **#note #convenience driven**
        [user orders because it's the path of least resistance, for strong negative emotions about cooking—anything goes when or stays]
        key signals: "It's just easier", "any crud when I can order", "it shows up at my door", "I don't have to do anything"
- **"Keep meaning to cook but never get around to planning"**
  - **Understand what's blocking the planning—is it time, skills, motivation, overwhelm, or competing priorities? Surface whether this is a systems problem or an avoidance pattern.**
    - **"What usually gets in the way?"**
      - **#note #lack of pre-planning driven**
        [said it purchase feels like a reasonable one off necessity because user didn't plan ahead]
        key signals: "I got home late and didn't want to cook", "I forgot to bring lunch", "I didn't have time to prep"
    - **"It's not that I don't know how to cook, I'm just lazy. Do you think you're ever in the same boat?"**
      - **#note #lack of pre-planning driven**
        [said it purchase feels like a reasonable one off necessity because user didn't plan ahead]
        key signals: "I got home late and didn't want to cook", "I forgot to bring lunch", "I didn't have time to prep"
    - **"Is it more about not knowing what to make, or not enjoying the process?"**
      - **#note #lack of pre-planning driven**
        [said it purchase feels like a reasonable one off necessity because user didn't plan ahead]
        key signals: "I got home late and didn't want to cook", "I forgot to bring lunch", "I didn't have time to prep"
- **"I actually scanned that specific meal"**
  - **Confirm this is genuinely intentional rather than rationalization. Distinguish between planned indulgence and impulse-driven purchases.**
    - **"Wow—now it's starting on a planned meal?"**
      - **#note #habitual from always driven**
        [order under stress, fatigue, time pressure, or low-bandwidth self-care]
        key signals: "when I'm stressed / just order", "busy week so I didn't cook", "I just needed something easy"
